Manual Magnetic Blinds

BetweenGlassBlinds™ offer a versatile and contemporary means of privacy and shading, melding essential functionality with a less institutional look and feel.

Perfect for assisted living facilities where resident safety is paramount, our totally cordless system is operated via sliding magnetic blocks. These simple-to-use and unobtrusive controls are located around the perimeter of the unit.

The full lifting operation happening in one slick and easy motion while the tilt function allows staff to set the levels of vision and light to resident specifications. Optional dual-control functionality is available, allowing resident privacy and dignity to be preserved.

The hermetically sealed, double-glazed panels are maintenance-free, reducing costs, as well as providing protection from moisture, odours and damage.

- Anti-ligature – totally cordless manual operation.
- Maintenance Free - hermetically sealed double-glazed panels protect blinds from moisture, dust and damage.
- Optional Dual control function (blinds can be operated from both sides).
- Available in sizes up to 2500mm high and 2000mm wide. (Please note, width and height restrictions can apply).
- Full range of glazing options including solar shading, low E, fire rated and noise reduction.
- Standard units are 28mm thick when glazed, with 4mm glass either side of the 20mm spacer bar.
- Available in 10 colours (see back page).
- Manufactured in accordance with all parts BSEN 1279 and have full CE accreditation.

Motorised- Battery Powered

BetweenGlassBlinds are also available in motorised units, ranging from battery-powered blinds to hard-wired multifunctional systems. Both options are user-friendly and allow instantaneous shading or privacy at the push of a button.

As with the magnetic blinds, the motorised units are hermetically sealed and double-glazed, meaning they help control infection, as the blinds are protected from any external emissions. To ensure noise is kept to a minimum, the motors powering the blinds are concealed within the head rail.

Our wireless motorized blinds are controlled via a rechargeable lithium battery pack. This can be attached magnetically to either the glass surface or the frame. Installation is quick and easy, with no unsightly wires to spot. The blinds can be operated via buttons on the battery pack, or at a distance with a remote control.

Our hard-wired option can be activated by a simple switch plate, or programmed to interface with most smart automation systems. For the ultimate in usability, the blinds can be controlled individually or in groups of up to 12.

- Anti-ligature – totally cordless motorised operation
- Maintenance Free - hermetically sealed double-glazed panels protect blinds from moisture, dust and damage.
- Simple up/down button functionality. Holding the button operates the tilt.
- Choose from Venetian, pleated, Duet Filtering or Duet Darkening blinds. Available in 10 colours (see back page).
- Solar panels can be provided to extend battery power.
- Available in sizes up to 2800mm high and 2500mm wide. (Please note, width and height restrictions can apply).
- Full range of glazing options including solar shading, low E, fire rated and noise reduction.
- Standard units are 28mm thick when glazed, with 4mm glass either side of the 20mm spacer bar.

Anti-Ligature Thumb Turn

The treatment of patients is the primary concern for secure-care and mental health facility staff. BetweenGlassBlinds Anti-Ligature Thumb Turn units provide large-scale observation, along with privacy and shading, without any risk.

Traditional vision panels can feel institutional, and are limited in size by the weight of the central panel of glass. Magnetically operated tilt-only integral blinds are the optimal alternative but can be unsuitable for some secure environments.

The BGB Anti Ligature Thumb Turn is the perfect solution. The unit is easy to install, simple to operate, and available in large sizes. It's tamper-proof, fully anti-ligature, and is on a continuous drive, so cannot be snapped or forced.

The units come with our impact tested toughened glass in thicknesses up to 19mm, making it ideal for security and fire rated placements, as well as increased acoustics.

It also benefits from the same stylish and contemporary finish as the rest of the BetweenGlassBlinds range.

- Anti-ligature – totally cordless thumb turn operation
- Maintenance Free - hermetically sealed double-glazed panels protect blinds from moisture, dust and damage.
- Can be used in large screens and bigger door panels.
- Available in sizes up to 2500mm high and 2000mm wide.
(Please note, width and height restrictions can apply).
- Full range of glazing options including fire rated and noise reduction.
- Available in 10 colours (see back page).
- Easy to operate even at maximum size with the thickest possible glass.

Bushey Hall Care Home Case Study

Background

This high-dependency care home in Hertfordshire provides specialist support for people with mental health problems. It is a high-category hospital facility offering round-the-clock support to semi-independent residents.

Project

The project's focus was to create a number of specialist flats. Fitted out to a high specification, designers had to comply with strict safety measures, as patient welfare was paramount.

Supply

BetweenGlassBlinds supplied tilt-only magnetic blinds on every new external window. As an increased safety measure, these integral blinds were fitted between specially-toughened, clear laminated glass.

BetweenGlassBlinds worked with the team at Window Care Herts Ltd, to ensure the magnetic blinds could function smoothly through thicker glass and technicians from both companies visited the project to make bespoke adaptations to the integral blinds.

The completely cordless system is operated with a neat and unobtrusive sliding magnetic block which is located around the perimeter of the unit. On this project, in a bid to keep residents safe, BetweenGlassBlinds was asked to make the magnetic block detachable so only staff could operate the blinds and patients could be protected from any unforeseen dangers. This was a simple task for the technical support team at BetweenGlassBlinds.

Additionally, the integral blinds provided extra infection control, as the units are hermetically sealed and safe from moisture and odours. The tilt-only magnetic blinds, locked between the two panes of glass, makes maintenance and upkeep minimal.

Paul West, managing director of Stevenage-based Window Care Herts Ltd., was extremely pleased with the products supplied from BetweenGlassBlinds.

Paul says:

“This project was complex, but we were really pleased with the finished work. We were there to fit windows and doors at the site, but our brief was complicated further when we were asked to adhere to greater safety requirements.

“The glass had to be specially-toughened laminated glass and that meant the magnetic blinds needed some adaptations. None of these issues caused us a problem – mainly thanks to BGB and its team of technical staff.

“They visited the site and worked alongside us so we could complete the project without any issues. I was very impressed with BGB.

“Over the years I have worked with other companies who provide blinds that fit between glass, but we’ve never received this kind of expert service.

“BetweenGlassBlinds was absolutely excellent and I’d like to praise the technical team for supporting us on this project.

“It’s always very much appreciated when you receive such superb service. It’s something you really don’t forget.

“From now on, we won’t be using any other firm when we need blinds fitting between our glass. The team at BetweenGlassBlinds will be receiving ALL of our orders.”

No Strings Attached

Stylish and safe design with no external cords.

Completely Maintenance Free - protected from moisture and damage.

Comes with a full 10 year warranty on the double glazed unit, 5 year warranty on the magnetic operation and 2 year warranty on the motorised blind.

Ideal for Residential Care Homes and Assisted Living Facilities.
