Manual Magnetic Blinds

Stylish and Sophisticated

BetweenGlassBlinds™ offer holiday accommodation a versatile and contemporary means of privacy and shading. Melding functionality with a chic look and feel, they are a smart alternative to traditional window furnishings. They reduce glare and sunlight, and regulate the temperature of a room. The integrated blinds can be used across all situations, from holiday lodges to activity centres, from windows to doors and side screens.

The totally cordless and child-safe system is operated via sliding magnets. These simple-to-use and unobtrusive controls are located around the edge of the unit. The units contain a unique tracking system for the magnet meaning that it cannot get lost or be removed from the rails, which is ideal for holiday accommodation.

The double-glazed panels are hermetically sealed, with the blinds inside protected from moisture, dust and damage. Unlike external curtains or blinds, they need no maintenance and are free from spills and odours.

The full lifting of the blind happens in one slick and easy motion while the tilt function allows visitors to set the levels of vision and light.

BEFORE

AFTER

- Available in sizes up to 2500mm high and 2000mm wide. (Please note, width and height restrictions can apply).
- Full range of glazing options including fire rated and noise reduction.
- Available in 9 colours (see back page).

Motorised Blinds

Elegant and Effortless

BetweenGlassBlinds also offer battery powered or hard-wired motorised units. These options are incredibly user-friendly and allow instantaneous shading or privacy at the push of a button.

Battery powered blinds are controlled via a rechargeable battery pack. This can be attached magnetically to either the glass surface or the frame. The blinds can be operated via buttons on the battery pack, or from the comfort of a sofa or bed with a remote control. With our sleek design, installation is quick and easy, with no electrician needed.

The hard-wired option can be activated by a simple wall switch, or programmed to interface with most smart-automation systems. They are powered externally, with nothing to detract from the refined and contemporary finish.

For the ultimate in usability, the motorised blinds can be controlled individually or in groups of up to 12. They can also be assigned to automatically open or close at set times.

Choose from Venetian or pleated blinds, with Duette Darkening providing the ultimate in light blocking for a great night's sleep.

As with all BGB products, the motorised units are also fully sealed and double-glazed, safe from smells, dust and germs. They can be used either in internal partitions or for exterior windows and doors.

- Choose from Venetian, pleated, Duet Filtering or Duet Darkening blinds. Available in 10 colours (see back page).
- Available in sizes up to 2800mm high and 2500mm wide. (Please note, width and height restrictions can apply).
- Full range of glazing options including fire rated and noise reduction.

Blackout Blinds

Introducing the BGB Blackout –

an integral magnetic blind designed to block out 98% of light, perfect for dark rooms, bedrooms and other areas where near blackout may be needed.

A specially designed honeycomb curtain with a bespoke internal foil lining to limit the amount light passes that through is now available hermetically sealed within a standard 28mm thick double glazed unit.

Like our BGB Venetian blind the blackout version is controlled via our uniquely robust and smooth-to-operate magnet to ensure easy operation even on the larger size blinds.

Blackout Blinds

- Maintenance Free - hermetically sealed double-glazed panels protected from moisture, dust and damage.
- Available in sizes up to 2999mm high and 1500mm wide.
(Please note, width and height restrictions can apply).
- Full range of glazing options including solar shading, low E, fire rated and noise reduction.
- Standard units are 28mm thick when glazed, with 4mm glass either side of the 20mm spacer bar.
- Available in 3 colours: White (RAL 9016), Silver (RAL 7042 and Champagne (RAL7032) – and the frame/magnet is available in all standard BGB magnetic colours.
