Manual Magnetic Blinds

BetweenGlassBlinds™ offer a versatile and contemporary means of privacy and shading.

Our totally cordless system is operated via sliding magnetic blocks. These simple-to-use and unobtrusive controls are located around the perimeter of the unit.

The full lifting operation happens in one slick and easy motion while the tilt function pivots the slats. Optional dual-control functionality is available and is suitable for internal areas where both residents and staff can benefit from operating the blinds.

The hermetically sealed double-glazed panels are maintenance-free, with the blinds protected from any dirt or damage.

Our integral blinds have been fire tested and are suitable for internal doors and partitioning walls.

- Cordless manual operation.
- Maintenance Free - hermetically sealed double-glazed panels protected from moisture, dust and damage.
- Available in sizes up to 2500mm high and 2000mm wide.
(Please note, width and height restrictions can apply).
- Full range of glazing options including solar shading, low E, fire rated and noise reduction.
- Suitable for internal and external doors, screens and external windows.
- Standard units are 28mm thick when glazed, with 4mm glass either side of the 20mm spacer bar.
- Available in 8 colours (see back page).
- Manufactured in accordance with all parts BSEN 1279 and have full CE accreditation.

Motorised- Battery Powered

BetweenGlassBlinds are also available in motorised units, ranging from battery-powered blinds to hard-wired multifunctional systems. Both options are user-friendly and allow instantaneous shading or privacy at the push of a button.

As with the magnetic blinds, the motorised units are hermetically sealed and double-glazed, meaning they help control infection, as the blinds are protected from any external emissions. To ensure noise is kept to a minimum, the motors powering the blinds are concealed within the head rail.

Our wireless motorized blinds are controlled via a rechargeable lithium battery pack. This can be attached magnetically to either the glass surface or the frame. Installation is quick and easy, with no unsightly wires. The blinds can be operated via buttons on the battery pack, or at a distance with a remote control.

Our hard-wired option can be activated by a simple switch plate, or programmed to interface with most smart automation systems. For the ultimate in usability, the blinds can be controlled individually or in groups of up to 12.

- Totally cordless motorised operation
- Maintenance Free - hermetically sealed double-glazed panels protected from moisture, dust and damage.
- Simple up/down button functionality. Holding the button operates the tilt.
- Choose from Venetian, pleated, Duet Filtering or Duet Darkening blinds/blackout.
- Solar panels can be provided to extend battery power.
- Available in sizes up to 2800mm high and 2500mm wide.
(Please note, width and height restrictions can apply).
- Full range of glazing options including solar shading, low E, fire rated and noise reduction.
- Standard units are 28mm thick when glazed, with 4mm glass either side of the 20mm spacer bar.

Anti-Ligature Thumb Turn

Where safety is paramount and minimal install is necessary BetweenGlassBlinds Anti-Ligature Thumb Turn units provide privacy and shading, without any risk.

The BGB Anti Ligature Thumb Turn is the perfect solution for large scale privacy and observation.

The units are easy to install, simple to operate, and available in larger sizes. The thumb turn itself is on a continuous drive, so cannot be snapped or forced.

The units come with many glazing options of choice, much like our standard BGB units and benefits from the same stylish and contemporary finish as the rest of the BetweenGlassBlinds range.

- Anti-ligature – totally cordless thumb turn operation
- Can be used in large screens and bigger door panels.
- Available in sizes up to 2500mm high and 2000mm wide.
(Please note, width and height restrictions can apply).
- Full range of glazing options including fire rated and noise reduction.
- Only available in white.
- Easy to operate even at maximum size with the thickest possible glass.

Blackout Blinds

Introducing the BGB Blackout –

an integral magnetic blind designed to block out 98% of light, perfect for dark rooms, bedrooms and other areas where near blackout may be needed.

A specially designed honeycomb curtain with a bespoke internal foil lining to limit the amount light passes that through is now available hermetically sealed within a standard 28mm thick double glazed unit.

Like our BGB Venetian blind the blackout version is controlled via our uniquely robust and smooth-to-operate magnet to ensure easy operation even on the larger size blinds.

Blackout Blinds

- Maintenance Free - hermetically sealed double-glazed panels protected from moisture, dust and damage.
- Available in sizes up to 2999mm high and 1500mm wide.
(Please note, width and height restrictions can apply).
- Full range of glazing options including solar shading, low E, fire rated and noise reduction.
- Standard units are 28mm thick when glazed, with 4mm glass either side of the 20mm spacer bar.
- Available in 3 colours: White (RAL 9016), Silver (RAL 7042 and Champagne (RAL7032) – and the frame/magnet is available in all standard BGB magnetic colours.

Hallmark Hutton View Case Study

Background

Recently opened, Hallmark Care Homes Hutton View is a beautiful purpose-built, 77-bedroom care home in Hutton, offering high standards of residential and dementia care.

Project

The project's focus was to create one of the most innovative and advanced care homes in the Essex area. Fitted out to the highest specification, with industry leading residential and dementia care measures, the home was tailored to meet the individual needs and wants of residents.

Supply

The project specified tilt and lift hardwired blinds for ease of use. BetweenGlassBlinds supplied FD30 fire rated units with 6.4mm laminate glass to complement the fire glass used. A mix of individually wired and grouped units able to work off the same power supply, were installed across offices and studies throughout the Home.

Bespoke made, the sleek and state-of-the-art motorised blinds are powered externally, with nothing to detract from the refined and contemporary finish. These blinds can be activated by a switch or by remote control.

Additionally, the integral blinds provided extra infection control, as the units are hermetically sealed and safe from moisture and odours.

The totally cordless system, locked between the two panes of glass, makes maintenance and upkeep minimal.

BetweenGlassBlinds Managing Director Mark Nash said, "We are pleased to have been a part of this fantastic new build. The Hallmark Care Homes mission is to provide innovation and focused care for their patients.

We at BGB have the same vision, and are glad to have been able to contribute to making the ideal residence."

No Strings Attached

Stylish and safe design with no external cords.

Completely Maintenance Free - protected from damage and dust.

Comes with a full 10 year warranty on the double glazed unit, 5 year warranty on the magnetic operation and 2 year warranty on the motorised blind.

Ideal for sliding and bifold doors.

Manufactured in accordance with all parts BSEN 1279 and have full CE accreditation.

Available colours

Venetian blind colours are representational only and these can be affected by your chosen glazing options.

Note: Colours and RAL numbers are representational only, please contact us for further information and to request a colour swatch.
